

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in this Application.

Listing of Claims:

Claim 1. (Currently Amended) Container having a wall, especially a bucket or similar, comprising an opening, which is orientated upwards and which can be closed by a cover, and a peripheral container edge, which is drawn outwards in a downward direction on the container wall, where the cover is detachably connected ~~thereto~~ to the container and ~~whereon~~ where said container edge includes at least one tongue-like element is connected in such a way that at least one part of the cover is raised due to a pivoting movement away from a starting position on the container wall, characterised in that said at least one tongue-like element engages said container edge from behind with at least one part of the said at least one tongue-like element, wherein the part of the tongue-like element is invisible toward an observer or from the outside, said part of ~~the~~ said at least one tongue-like element can be guided outwards, in front of said container edge, by the pivoting movement such that said part of said at least one tongue-like element is visible to a user of said container, and said part of ~~the~~ said at least one tongue-like element cannot be guided back behind said container edge when said at least one tongue-like element is pivoted back towards the starting position.

Claim 2. (Currently Amended) Container according to Claim 1, characterised in that said part of ~~the~~ said at least one tongue-like element is designed as an integral part of said at least one tongue-like element.

Claim 3. (Currently Amended) Container according to Claim 1, characterised in that said part of ~~the~~ said at least one tongue-like element can be deformed or broken open during the pivoting movement of said at least one tongue-like element.

Claim 4. (Currently Amended) Container according to Claim 1, characterised in that said container edge displays, in the region of said at least one tongue-like element, a downward-pointing edge projection that engages a recess in said at least one tongue-like element.

Claim 5. (Withdrawn) Container according to claim 4, characterized in that edge projection is provided with tongue that is engaged by said part of the tongue-like element from behind.

Claim 6. (Withdrawn) Container according to Claim 4, characterised in that a predetermined breaking line is located in the area of tongue-like element engaging tongue from behind.

Claim 7. (Currently Amended) Container according to Claim 4, characterised in that webs partially overlapping said recess are located on the side of said at least one tongue-like element facing said container wall as parts of ~~the~~ said at least one tongue-like element between said edge projection and said container wall.

Claim 8. (Withdrawn) Container according to Claim 4, characterised in that tongue-like element is connected to edge projection by breakable links.

Claim 9. (Withdrawn) Container according to Claim 1, characterised in that the tongue-like element is connected to the container edge by breakable links.

Claim 10. (Previously Presented) Container according to Claim 1, characterised in that parts of ~~the~~ said at least one tongue-like element are provided on the lateral ends of said at least one tongue-like element, which engage the respective lateral ends of said container edge facing said at least one tongue-like element from behind.

Claim 11. (Withdrawn) Container according to Claim 1, characterised in that ribs are provided between the side of tongue-like element facing container wall and container wall to impede a pivoting movement towards container wall.

Claim 12. (Currently Amended) Container according to Claim 1, characterised in that ~~the~~ a downward-facing edge side of said at least one tongue-like element stands back relative to ~~the~~ a lower end of said container edge drawn downwards on said container wall.

Claim 13. (Withdrawn) Container according to Claim 1, characterised in that tongue-like element displays at least one operating hole for performing the pivoting movement.

Claim 14. (Currently Amended) Container according to Claim 1, characterised in that ~~the~~ a side of said at least one tongue-like element facing away from said container wall displays a textured surface.

Claim 15. (Withdrawn) Container according to claim 1, characterised in that at least one part of the tongue-like element located on tongue-like element displays a mark that is at least partly covered by an area of container edge when tongue-like element is in its starting position.
